- (54) Title: INFORMATION SYSTEM FOR MOTOR VEHICLES
- (54) Bezeichnung: INFORMATIONSSYSTEM FÜR KRAFTFAHRZEUGE

(57) Abstract: The invention relates to a system for providing information in accordance with factors that impact on the driver, (57) Abstract: The invention relates to a system for providing information in accordance with latter is the invention relates to a system for providing information in accordance with latter is driven at the invention of the inv provided together with corresponding information, the sheer quantity of which leads to a risk that the driver is placed under too much strain or is distracted from the traffic situation during the operation or actuation of functions of this type, or whilst reading the information that has been provided, thus increasing the potential risk of an accident. The aim of the invention is to provide a system of the aforementioned type, which greatly simplifies the operating complexity, without reducing the concentration of the driver. According to the invention, information is issued in accordance with strain factors that act objectively on the driver, driver activities and driver-specific characteristics that influence the driving of the vehicle. The inventive system can be used advantageously in motor vehicles in order to relieve the strain on the driver, thus ensuring that the driver is not overtaxed in the majority of driving situations and permitting the relaxed driving of the vehicle.
